Problem 1

$$\xi \sim P(\lambda),$$
 $p(\xi = k) = e^{-\lambda} \frac{\lambda^k}{k!}$
 $\gamma_n \sim Bin(n, p),$ $p(\gamma_n = k) = C_k^n p^k (1 - p)^{n-k}$

 η - number of successful outcomes of γ_k , where k is a realization of ξ .

$$p(\eta = k) = \sum_{i=k}^{\infty} p(\xi = i) p(\gamma_i = k) = \sum_{i=k}^{\infty} \frac{\lambda^i}{i!} e^{-\lambda} C_k^i p^k (1 - p)^{i-k} =$$

$$= \sum_{j=0}^{\infty} \frac{\lambda^{k+j}}{(k+j)!} e^{-\lambda} \frac{(k+j)!}{k!j!} p^k (1 - p)^j = \frac{(p\lambda)^k e^{-\lambda}}{k!} \sum_{j=0}^{\infty} \frac{\lambda^j (1 - p)^j}{j!} =$$

$$= \frac{(p\lambda)^k e^{-\lambda}}{k!} e^{\lambda(1-p)} = \frac{(p\lambda)^k e^{-\lambda p}}{k!}$$

Problem 2

r - reviewer, $r \in \{kind, strict\}$ $t_1 \sim N(30, 10)$ - spend time if reviewer is strict. $t_2 \sim N(20, 5)$ - spend time if reviewer is kind. p(r = kind) = p(r = strict) = 0.5Find p(r = kind|t = 10).

$$\begin{split} p(r=kind|t=10) &= \frac{p(t=10|r=kind)p(r=kind)}{p(t=10|r=kind)p(r=kind) + p(t=10|r=strict)p(r=strict)} = \\ &= \frac{p_1(10)*0.5}{p_1(10)*0.5 + p_2(10)*0.5} = \frac{p_1(10)}{p_1(10) + p_2(10)} = \frac{1}{1 + \frac{5}{10}e^{-\frac{(10-30)^2}{200} + \frac{(10-20)^2}{50}}} = \\ &= \frac{1}{1 + 0.5e^{-\frac{400}{200} + \frac{100}{50}}} = \frac{1}{1 + 0.5e^0} = \frac{2}{3} \end{split}$$
